

# Nevo Iflah

Full-Stack Developer | Mobile & Web | [nevoiflah.com](https://nevoiflah.com)

☎ +972-50-7908555 | [nevo.iflah6@gmail.com](mailto:nevo.iflah6@gmail.com) | [linkedin.com/in/nevo-iflah](https://linkedin.com/in/nevo-iflah) | [github.com/nevoiflah](https://github.com/nevoiflah)

## SUMMARY

Full-stack developer with hands-on experience across mobile and web development and cloud-based applications. Strong background in C#, JavaScript, Python, and RESTful APIs, with proven ability to design and ship scalable solutions for paying clients as well as academic and independent projects. Demonstrated leadership skills from military command experience. Seeking a full-stack developer role in a technology-driven team where strong engineering and problem-solving skills can create impact.

## SOFTWARE TOOLS & TECHNOLOGIES

- Programming Languages: C#, Java, TypeScript, JavaScript, Python, C, SQL, HTML5/CSS3.
- Frameworks & Libraries: React, React Native (Expo), Node.js, Express.js, ASP.NET Core Web API, Vite, Tailwind CSS, Bootstrap, Flask.
- Cloud & Databases: AWS (Lambda, API Gateway, Cognito, IoT Core, SES, CloudFront), Firebase, MongoDB, PostgreSQL, DynamoDB (NoSQL), SQL Server.
- Tools & Version Control: Git, GitHub, Azure Data Studio, WebSocket, MQTT Protocol.

Core Skills: Full-Stack Development, Mobile Development (React Native), RESTful API Design, Real-Time Systems (WebSocket), Data Analysis

## FREELANCE PROJECTS

### FOR: Fit On Ring

*Freelance Full-Stack Developer, Independent Client (Feb 2026 – Jun 2026)*

- Health Monitoring Ecosystem: Mobile application built with React Native (Expo SDK 52), delivering real-time biometric visualization through a custom glassmorphism interface.
- Native Hardware Integration: Engineered a custom Expo module, ForRingSdk, to bridge the CRPSmartRing native SDK, enabling low-level communication and hardware control on both iOS (Swift) and Android (Kotlin).
- Advanced Data Synchronization: Implements a dual-phase protocol that prioritizes immediate 4-day sleep/activity data while background-syncing 7-day high-resolution telemetry, including HRV and heart rate.
- System Resilience & Fidelity: Features a multi-layered Watchdog Recovery system to mitigate SDK latency and a Sleep Fallback Engine that intelligently alternates between algorithms to ensure maximum data coverage.
- Tech Stack: React Native (Expo), Swift/Kotlin Native Modules, MongoDB Atlas (Time-series), Firebase Auth, and SVG-based charting.

### RINGA - Hyper-Local Social Discovery App

*Freelance Full-Stack Developer, Independent Client (May 2026 – Present)*

- Real-time, location-based social platform connecting users within a dynamic 75–200m radius using proximity- and interest-based discovery.
- Architected a WebSocket-powered real-time messaging system with configurable delayed-first-message logic and automatic chat expiry for inactive conversations.
- Implemented privacy-first features including Ghost Mode, geofenced Ghost Zones, and Haversine-based proximity calculations for accurate real-time distance tracking.

- Built a content moderation pipeline with automated filtering and a reporting/blocking system, alongside SSO authentication (Apple/Google Sign-In) and bilingual (Hebrew/English) UX.
- Tech Stack: React Native (Expo) frontend with TanStack Query, Express.js/TypeScript backend with WebSocket server, PostgreSQL via Drizzle ORM, Google Cloud Storage.

### **Buddiz - P2P Craft Beer E-Commerce Platform**

*Freelance Full-Stack Developer, Independent Client (Dec 2025 – Feb 2026)*

- Cloud-native web application featuring a marketplace interface, secure user authentication via Cognito, and serverless payment integration.
- Users can browse a product catalog, complete secure payments via the PayPal Live API, track real-time order status with animated updates, and receive automated HTML invoices.
- Includes an admin dashboard for product inventory management, order workflow control (Approve/Deny), and sales analytics.
- Tech Stack: React/Vite frontend, Node.js AWS Lambda Serverless backend, AWS API Gateway, DynamoDB NoSQL database, Amazon Cognito for identity, AWS SES for transactional emails and CloudFront CDN.

## **EDUCATION**

---

**B.Sc. in Computer Science** *Ruppin Academic Center (2026)*

- Focus areas: Software Development, Cyber & Communications
- Key Courses: Data Structures, Web Programming, Software Engineering, Object-Oriented Design

**High School Diploma** *"Dror" High School, Bnei Dror*

## **MILITARY SERVICE**

---

**2018 – 2021** *Commander, Israel Defense Forces (IDF)*

- Commander in combat, led a 20-soldier unit through tactical operations and training under high-pressure conditions with discipline and precision.
